

# Brake Pads

Using Genuine Toyota Brake Pads makes a difference that can be obvious in the installation process as well as in brake performance. Because Genuine Toyota Brake Pads are designed and manufactured specifically for the Toyota vehicles they're intended for. In many cases, non-genuine pads are sold for use on a variety of makes and models, which can compromise fit and braking performance.

For example, the friction material used in Genuine Toyota Brake Pads is designed specifically to maintain the dynamics engineered in Toyota braking systems. Non-genuine brake pad friction material can affect braking performance and may lead to accelerated rotor wear, excessive brake noise or vibration and pulsation.

Also, Genuine Toyota Brake Pads have precision-machined backing plates which allow the brake pads to move freely within the calipers for smooth, efficient operation.

## PRODUCT FEATURES

**Friction Materials:** These materials in Toyota brake pads are designed specifically for the dynamics of the Toyota braking system. Other pads may compromise the braking system performance, leading to accelerated rotor wear, excessive noise, vibration and pulsation.

**Backing plates:** Backing plates on Genuine Toyota Brake Pads are precision-machined to allow the brake pads to move freely within the calipers for smooth efficient operation.

**Toyota Designed and Engineered:** Only Genuine Toyota Brake Pads are designed by Toyota and built specifically for your vehicle according to Toyota specifications and tolerances.
