

Wiper Blades

Toyota makes Wiper Blades for every vehicle model we manufacture to uncompromised fit and performance.

Unlike aftermarket wiper blades, which often utilize synthetic rubber, Genuine Toyota Wiper Blades feature a natural compression-molded rubber construction, designed to outlast and out-perform the competition.

It only takes a minute to check your customers' wiper blades to make sure they're not streaking, smearing or chattering during operation. They'll appreciate the consideration.

Remember, even in good weather, the sun, pollution and other road contaminants take a harsh toll on wiper blades. So make sure you give your customers the best with Genuine Toyota Wiper Blades.
